## OBJECTIVE

---

I Am a Mern Stack Developer with a vast array of knowledge in frontend and backend end languages responsive frameworks. Aiming to join an organization as a web Developer that encourages creativity and innovation I have 10-month experience in web development and have the vital skills for solving complex problems that will continue to contribute to overall my success as a developer, I have completed a number of projects some of them are deployed on Vercel and Netlify

## EDUCATION

---

**Bachelor Information Technology** PMAS ARID University Rawalpindi

**CGPA:**3.50 out of 4

**Intermediate FSC** FAZIA College Kalar Kahar Federal Board

**Score:**810 out of 1100 percentage:75%

**Materic** Army Public School Ordinance Road Rawalpindi Federal Board

**Score:**884 out of 1050 percentage:85%

## WORK EXPERIENCE

---

### **Data scientist Internship Atomic Energy**

learn python language work on software anaconda data training using tensor flow and tensor board Also write a binding

### **Bootcamp Mern Stack developer offered by PASHA & Pseb**

**Oct 2022- feb 2023**

Learn about import skills required to be a Mern stack developer Html, CSS, React.js, redux toolkit, react query Node.js, MongoDB also complete two full stacks Mern project e-commerce Website, social media website number of another project

### **JUNIOR WEB DEVELOPER INTERNSHIP BITSOLTECHNOLOGIE**

work on advanced technologies like react material ui, typescript, backend with nest.js, validation through react hook form and yup schema, built completed full stack project library book management system front end with react typescript use react toolkit query for API call and global state management backend with nestJS MongoDB

work with industrial projects fix the bugs and issues Best coding practices

### **Remote Job sixsense technologies**

work on a client project social media website query peer work on admin module and authentication module global state management through the redux toolkit sure route also work on chat module

## PROJECTS

---

### netflix hero page clone

use carousel responsive navbar, bootstrap, also handle theme dark and white through context API, footer designed, gallery section user can watch trailer off

## HOBBIES

---

- development
- doing search on internet

## LANGUAGE

---

- English
- Urdu

## SOFTWARE

---

- Vs code
- visual studio
- anconda
- adobephotoshope
- mysql

### E-commerce website TA watchStore

Complete Mern stack project user can see products which are displayed on the home page for a greater user experience using a card and transition effect on the card there is the implementation of pagination user selects the product user sees the detail page of the product used directly add to cart if the product is available in stock user can add it to cart. complete cart management but before checking out user must log in if he or she does not have an account or must register themselves after that four-step to confirm the order user gives the shipping address detail and then move to the payment method screen select payment method moves the order detail page where every information about the order is given and the subtotal is calculated then confirm the order and check the status of the order user can also check the order history and also update the profile

**The core concept:** carousel, responsive navbar, card, transition, context API use reducer hook use state, use effect, local storage, backend Jwt, bcrypt, middleware, backend validation use Cloudinary to store images, all data related to the user, order shipping address is store in database

### Ta moviex website

user can search any type of movie Tmbd database used for the API call for a good user experience and attractive design user can check upcoming and weekly monthly popular movies carousel applied user can select the movie detail page shown which contains recommendations movies, the cast of movies, similar movies appear user can select the type of genres according to that movie displayed also sort the movies ascending, descending and alphabetical hosted on vercel

**the core concept:** Redux toolkit custom hook, carousel, days, lazy loading, react-router Dom, Search filter, infinite scroll, Sass, promise all function, cards etc.

### E store Cart management

pagination filter routing, use library react use cart to manage the whole cart of users use dumb component hosted on vercel

### full stack book management website

**The core concept:** app using React Mui Grid login signup frontend validation react-hook form redux toolkit query, backend NestJs backend protected routing, use Guards password strategy

### resturant dummy web app

**The core concept:** app using React Mui layout structure mobile responsiveness sidebar, top navbar, cards, tables, screen ( home, about, gallery, menu, contact) secure routing use react typescript react hook form for login signup validation, backend NestJs for authentication

### Socialmedia query peer web App(client project)

- I work on authentication modules for frontend login signup
- work on authentication modules backend apps using NodeJs MongoDB
- work on the admin panel,
- work on the chat module
